

Warm UP (8min)

Find your starting and ending points on the number line.

1. $5 + () = 4$
2. $5 - () = 8$
3. $() + 5 = -2$
4. $5 + (-3) = \underline{\quad}$
5. $(-6) + (-3) = \underline{\quad}$
6. $5 + () = 0$
7. $2 + (-6) = \underline{\quad}$
8. $-(-5) + (-3) = \underline{\quad}$
9. $13 + (-15) = \underline{\quad}$

GOOD guys
Positive #

BAD guys
Negative #

WARM UP (8 min)

1. $5 + (1) = 4$
2. $5 - (-1) = 8$
3. $(-7) + 5 = -2$
4. $5 + (-3) = \underline{2}$
5. $(-6) + (-3) = \underline{-9}$
6. $5 + (0) = 0$
7. $2 + (-6) = \underline{-4}$
8. $-(-5) + (-3) = \underline{2}$
9. $13 + (-15) = \underline{-2}$

If you are combining two numbers with the **SAME** sign then add them and keep the sign.

Example

$$-3 - 6 = -9 \quad \left. \begin{array}{l} \\ \\ \end{array} \right\} 4 + 5 = 9$$

If you have two numbers with **Different** signs then find the difference (subtraction) and give it the sign of the larger number.

Example

$$-7 + 2 = -5 \quad \left. \begin{array}{l} \\ \\ \end{array} \right\} 4 - 9 = -5$$

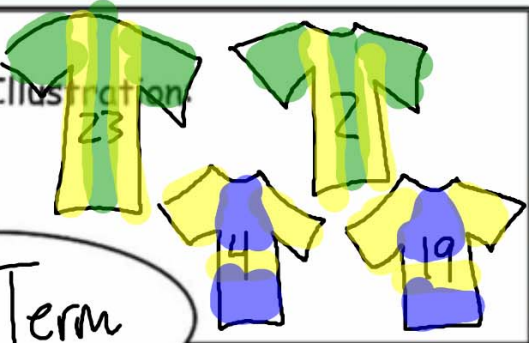

Vocab Catchup

Distribution ~ Like Terms ~ Product ~ Quotient ~ Difference
~ Sum

<p>Definition: Spreading the term directly in front of parenthesis to all the terms inside using multiplication.</p>	<p>Illustration: Spread the Butter</p> 
<p>Examples: $4(x+5)$</p>  <p>$4x+20$</p>	<p>Non-Examples:</p>

Vocab Catchup

Distribution ~ **Like Terms** ~ Product ~ Quotient ~ Difference
~ Sum

<p>Definition: Terms that have the same "jerseys" i.e. Variables \rightarrow they can be combined.</p>	<p>Illustration:</p> 
<p>Examples: $4a+6b+7a$</p> <p>$4a+7a+6b$</p> <p>$11a+6b$</p>	<p>Non-Examples:</p> <p>$4x^2+3x$</p> <p>Not the same!!!</p>

Unit 1: Numbers and Expressions

Day 5/9: Algebraic Expressions

Expressions

Five more than a number is multiplied by six.

$$(5+N) \cdot 6$$

We can spread that butter!

$$(5+N)6$$

$$30+6N$$

Write this above every problem

P.E.M.D.A.S.

1. P ()

2. E²

3. M •

4. A +

D /
S -

Like Terms

Make sure you take the negative with the number when you move them

Like Terms

$$5x - 3 - 3x + 6x + 4$$

$$5x - 3x + 6x + 4 - 3$$

$$2x + 6x + 1$$

$$8x + 1 = 1 + 8x$$

I just like putting positive numbers first.
The "flip-flop" property lets me do that

Again "flip-flop" says this is the same.

Like Terms

$$2b - 8a + 3b + 4a$$

$$4a - 8a + 2b + 3b$$

$$-4a + 5b$$

Remember that is the same as

$5b - 4a$
because of the "flip-flop" rule

Like Terms

$$-3 - 6a + 4a + 4$$

$$4a - 6a + 4 - 3$$

$$-2a + 1$$

Like Terms

Has a hidden neg. one: $-1ab$

$$5x^2y - ab + 2yx^2 + 4ab$$

$$4ab - ab + 2yx^2 + 5x^2y$$

$$3ab + 7x^2y$$

Like Terms

$$8rt^2 - 2rt - 3t^2r + 6rt$$

$$8rt^2 - 3t^2r + 6rt - 2rt$$

$$5t^2r + 4rt$$

PEMDAS

$$5(3 + 2)$$

$$5(5)$$

$$25$$

Distribution

SPREAD BUTTER

$$5(3 + 2)$$

$$5 \cdot 3 + 5 \cdot 2$$

$$15 + 10$$

$$25$$

← The Same! →

Distribution

Spread the butter ←

$$2 \cdot (4 + 5 - 1 + 9 - 10)$$

$$2 \cdot (9 - 1 + 9 - 10)$$

$$2 \cdot (8 + 9 - 10)$$

$$2 \cdot (17 - 10)$$

$$2 \cdot 7 = 14$$

The Same!!!

$$(2 \cdot 4 + 2 \cdot 5 - 2 \cdot 1 + 2 \cdot 9 - 2 \cdot 10)$$

$$8 + 10 - 2 + 18 - 20$$

$$18 - 2 + 18 - 20$$

$$16 + 18 - 20$$

$$34 - 20$$

$$14$$

Distribution

Skip it

<https://youtu.be/5T0utQ-XWGY?t=3m7s>

T to the A, to the S T E Y - girl, you're tasty.

T to the A, to the four, to the tres, to the two, to the uno.

$$T(A + 4 + 3 + 2 + 1)$$

D to the E, to the L I C I O U S,

Not
Super
Important

Distribution

$$t(a + sty)$$

$$t \cdot a + t \cdot sty$$

$$t \cdot a + st^2y$$

Careful to butter the
right piece of bread.

Distribution

$$2(3y + b) - (6y + a)$$

$$2 \cdot 3y + 2 \cdot b - 6y + -a$$

$$\overset{\text{like}}{6y} + 2b - \overset{\text{terms}}{6y} - a$$

$$6y - 6y + 2b - a$$

$$0 + 2b - a = 2b - a$$

Distribution

Look for the same uniform!! Like terms.

$$3x(a + 2 - 5ax) + 4ax$$

$$3xa + 3x \cdot 2 - 3x \cdot 5ax + 4ax$$

$$3xa + 6x - 15axx + 4ax$$

$$3xa + 4xa + 6x - 15ax^2$$

$$7xa + 6x - 15ax^2$$

No problems
on u1d5 wksht

Distribution

RUN IT
BACKWARDS

$$\square \frac{14x}{?} - \frac{10}{?}$$

$$\frac{14x}{2} - \frac{10}{2}$$

$$2 \cdot (7x - 5) = 14x - 10$$

I want to "steal"
divide the same
number from both
terms: the biggest
number I can divide
by is 2

No problems
on u1d5 wksht

Distribution

RUN IT
BACKWARDS

note:

$$\frac{x}{x} = 1$$

$$\frac{6x}{6x} = 1$$

$$\frac{12c}{6} = 2c$$

$$\frac{36y^2x}{6x} - \frac{6x}{6x} + \frac{12xc}{6x}$$

$$6x(6y^2 - 1 + 2c)$$
